

## **Training Programme 39 Cycle**

For the 39th Cycle, the main training areas are identified that, in a non-exhaustive way, group together the research and training topics associated with the Disciplinary Scientific Sectors present in the proposal for accreditation of the PhD Course:

- Area #1: Energy, Building and Environment,
- Area #2: Soil, Infrastructure and Mobility,
- Area #3: Culture, Nature and Wellness.

For the scheduling of the training program, it is privileged to conduct interdisciplinary courses during the 1st year of the PhD Course; these courses may consist of i) University seminars (valorisation and dissemination of research results, scientific writing, IT improvement, language improvement, promotion of European research, evaluation of research, ii) training days and/or seminars on transdisciplinary issues and selected technologies, iii) in-training days/seminars with visits of facilities (laboratories, production departments, etc... ) Departmental and affiliated companies.

From the 2nd year, instead, specific training activities will be privileged with reference to each of the previously identified areas.

In order to promote the autonomy of PhD students, it will also be possible to submit to the Board of Teachers, in agreement with the supervisor, proposals for further "external" training events to the offer identified for the 39th Cycle.

To facilitate the activity of PhD students, also in relation to the different types of scholarships present in the 39 Cycle, will focus, where possible, the activities scheduled in the first 3 days (Monday, Tuesday, or Wednesday) of the last week of each month.
