## The Ideal (of the) City

from the abstraction to the architectural plasticity

Architectural extensions of the visionary city:

landscape and community in the royal life of San Leucio

7th edition of the International workshop in Architectural and Urban Design "Stories from the Cities" coordinated by University of Campania "Luigi Vanvitelli". This is the fourth workshop on the subject of the "Organic City", in collaboration with the DIA | Bauhaus - Dessau, Anhalt University and the TU/e - University of Eindhoven. This edition, placed in the (un)ideal city of San Leucio, within the fragments of an unfinished 18th-c. project, an ideal topography and a real city, tries to base at Officina Vanvitelli, a design work-in-place, inside a site-specific architecture... Starting with new projects for San Leucio.
